[12.61]

Grid of numerical data for topography and elevation. The grid is approximately 100 columns wide and 100 rows high. Each cell contains a numerical value representing elevation or depth. The values are organized in a regular grid pattern, with some larger numbers (e.g., 100, 25, 50, 75, 100) appearing at the bottom of the grid, likely indicating specific elevation points or markers.
